A curated list of important points for my reference.

1. Introduction to Algorithms, by Cormen, Leiserson, Rivest, and Stein, is an excellent source for thous of you not intimidated by a fair amount of mathematics.

2. The key to efficieny is a good algorithm, not clever coding tricks.

3. **SEARCH ALGORITHMS**

    (a) a method for finding an item or group of items with specific properties within a collection of items.
